Final Project GCBV Plan

How much effort on average do you estimate it will take to refactor a view to use GCBVs?
-I estimate using GCBVs to refactor a view will take me about 30 minutes.

Based upon the estimate above, what do you estimate it will take to refactor all of your views?
-About 1 hour.

Do you have any views in your Final Project that do not lend themselves to using GCBVs? Why not?
-No, I think all sections I plan to use could use GCBVs.

How many lines of code do you estimate would be eliminated from your Final Project by refactoring to GCBVs?
-About 50 lines for each section including detail, create, update, and delete views.
