Final Project Plan

Which pages in your Final Project will include pagination features? Why these? Why not others?
-I'm planning to create a room registration website which people could reserve room for studying, meeting, holding parties, watching movies, and so on. The Room Name pages and administrators list might will include pagination features since there will be more than 12 values and if put them in one page, the website will not look like organized.

How many rows of data will you need to populate in the database tables to test the pagination features?
-About 12-25 rows I will need to populate in database.

Where will you get or how will you generate the test data values?
I might need to use building names at UIUC which I could search on UIUC official website.

How could you adapt the data migration code used in the first part of this assignment to load test data values of your own?
-I will copy the migration code in start files and change the section names to mine information. I will use [makemigrations] command to create new migrations. Then use [migrate] command to apply the migrations I generated.
